QUALITY CONTROL REQUIREMENTS

Amendment Record for this Specification Part

This Specification is Council's edition of the AUS-SPEC generic specification part and includes Council's primary amendments.

Details are provided below outlining the clauses amended from the Council edition of this AUS-SPEC Specification Part. The clause numbering and context of each clause are preserved. New clauses are added towards the rear of the specification part as special requirements clauses. Project specific additional script is shown in the specification as italic font.

The amendment code indicated below is 'A' for additional script 'M' for modification to script and 'O' for omission of script. An additional code 'P' is included when the amendment is project specific.

SPECIFICATION CQC QUALITY CONTROL REQUIREMENTS

GENERAL

CQC1 SCOPE

1. This Specification covers the contractual requirements for the quality control testing and survey by the Contractor; including the minimum test frequencies to be employed to demonstrate conformance to the requirements of the technical specifications.

Testing and Survey

CQC2 LOTS

1. All items of work shall be subdivided into lots. Each lot shall be given a unique lot number.

2. Lots shall be chosen by the Contractor but shall be within the limits given in Annexure CQC-B. In general, the size of the lot shall not exceed one day's output for each work process designated for lot testing.

Lot Size

3. The lot numbers shall be used as identifiers on all surveys and test results.

Lot Numbers

4. The Contractor shall determine the bounds of each lot before sampling and shall identify each lot clearly.

Lot Identification

5. The boundaries of a lot may be changed if subsequent events cause the original lot to be no longer essentially homogeneous.

Lot Boundaries

6. The lot identification system and sample numbering system shall allow test results to be positively identified with material incorporated in the works.

Test Results

CQC3 SAMPLING AND TESTING

1. All compliance inspections and tests shall be based on lots.

Lots

2. The maximum lot sizes and minimum testing frequencies are listed in the Annexures to the relevant Specifications and/or in Annexure CQC-B to this Specification. Where no minimum frequency of testing, or maximum lot size is stated in the Specification, the Contractor shall nominate appropriate frequencies for the Superintendent's approval.

**Lot Sizes
Frequency of Testing**

3. Sampling shall not be restricted to locations dimensioned or otherwise defined for setting out the Works in the Drawings or Specification, but shall be undertaken in a random or unbiased manner, as approved by the Superintendent, at any location within the Works to demonstrate its compliance with the Specification.

Sampling Locations

4. Where Test Methods are nominated in the Technical Specifications, sampling and testing shall be carried out by a NATA registered laboratory accredited for those test methods and sampling procedures. Sampling shall be conducted by personnel from the NATA registered laboratory which has been accredited for that sampling procedure and shall be supervised by the approved signatory from that laboratory. Test results shall be reported on NATA endorsed test documentation which shall include a statement by the approved signatory certifying that the correct sampling procedures have been followed.

Sampling and Testing

- 5. In special circumstances the Principal may accredit a laboratory that is not NATA registered for specific tests or inspection procedures. **Special Accreditation**
- 6. The Contractor shall reinstate all core holes, test holes, excavations and any other disturbance resulting from any testing activity. The reinstatement shall be to a standard which is at least equal to the specified requirements for the particular work. **Reinstatement**
- 7. Random sampling techniques shall be used for each lot for the control of compaction of each continuous layer of earthworks, flexible pavement and asphalt. Annexure CQC-A defines the method to be used for determining test locations of random sampling in each lot. **Random Sampling**
- 8. For quality control of processes other than compaction of layers of earthworks, flexible pavement and asphalt, the sampling locations will be proposed by the Contractor and will require the approval of the Superintendent. **Sampling Locations**
- 9. In all cases the samples shall be each considered to be representative of the lot and all test results will be required to meet the appropriate tolerances for the lot. **All Test Results to Meet Tolerances**

CQC4 SURVEYING

- 1. Surveying Control shall include all measurement, calculation and record procedures necessary to: **Requirements**
 - (a) set out the Works
 - (b) verify conformance to the Drawings and Specification in relation to dimensions, tolerances and three dimensional position
 - (c) determine lengths, areas or volumes of materials or products, where required for measurement of work.
- 2. The Contractor shall appoint qualified surveyors who are eligible for membership of the Institution of Surveyors, Australia or the Institution of Engineering and Mining Surveyors, Australia to supervise and take responsibility for all Surveying Control. **Surveyor Qualifications**
- 3. The procedures and equipment used must be capable of attaining the tolerances nominated in the Specification. **Equipment**
- 4. Sampling for conformance verification purposes shall not be restricted to the locations used to set out the Works. **Sampling Locations**
- 5. The Contractor shall submit a Survey Conformance Report to the Superintendent for each lot or component where design levels, position and/or tolerances have been specified. The Survey Conformance Report shall show 'specified vs actual' for position (defined by co-ordinates or chainage and offset), level and tolerance as appropriate and shall be certified by the qualified surveyor responsible for the verification survey. **Conformance Report**

CQC5 RECORDS

- 1. Conformance records shall be stored and maintained such that they are readily retrievable and in facilities that provide a suitable environment to minimise deterioration or damage and to prevent loss. **Storage**

2. The Contractor shall submit all conformance records to the Superintendent for inspection and approval. If requested by the Superintendent, the Contractor shall provide copies of the records or test results at no cost to the Principal.

**ANNEXURE CQC-A
RANDOM SAMPLING**

CQC-A1 GENERAL

1. Random sampling of test locations shall be used to control relative compaction of each layer of:
 - (i) earthworks
 - (ii) selected material zone
 - (iii) flexible pavement
 - (iv) asphalt
 - (v)
 - (vi)
 - (vii)

which are generally rectangular in area.

2. By arrangement with the Superintendent, areas which are not (generally) rectangular may be notionally rearranged to suit the method of determining sample locations as described in hereunder.

CQC-A2 SAMPLING RATES

1. The number of samples (n) per lot shall not be less than shown in Table CQC-A1.

LOT SIZE	MINIMUM NUMBER OF SAMPLES PER LOT	
	Each continuous layer of earthworks	Each continuous layer of selected material zone or pavement layers
> 5000m ²	The greater of: 6 samples or 1 sample per 2000m ²	The greater of: 10 samples or 1 sample per 1000m ²
1000m ² to 5000m ²	5	The greater of: 5 samples or 1 sample per 500m ²
200m ² to 1000m ²	3	3
< 200m ²	1	1

Table CQC-A1 - Sampling Rates

CQC-A3 RANDOM SAMPLING LOCATIONS

1. Sampling locations within a lot for the control of relative compaction shall be determined as follows:
 - (i) Representing the lot as a rectangle, sub-divide the lot lengthwise into equi-area sub-lots in accordance with the number of samples selected (n) in accordance with Table CQC-A1.
 - (ii) Establish six grid lines within the lot, as illustrated in Figure CQC-A2;
 - (iii) Throw a die to select a number between 1 and 6. This determines which grid line to use for the sample location in sub-lot 1;
 - (iv) Throw die to select a group (1-6) in Table CQC-A2;
 - (v) Throw die twice to select two random numbers (between 1 and 6) for row and column in Table CQC-A2 and obtain random fraction R;
 - (vi) Length co-ordinate for sample location in Sub-lot 1 = RL/n ;
 - (vii) For sample location in next sub-lot:-
 Add L/n to previous length co-ordinate.
 Add 1 (on a cycle of 6) to previous grid line.

ANNEXURE CQC-B MAXIMUM LOT SIZES AND MINIMUM TEST FREQUENCIES

GENERAL

1. The maximum lot sizes and minimum test frequencies are separately specified for all major activities covered by the Technical Specifications as listed hereunder.
2. The requirements applicable to this Contract are identified with an asterisk indicating that only these details are attached in this Annexure.
3. Where material/product quality certification can be obtained from the supplier, tests listed per contract/separable part need not be repeated.
